

Network Engineer

On-site work in Warsaw

Responsibilities:

- Responsible for the development of high-level software in a satellite communication terminal.
- Creating software for user communication.
- Managing the network configuration of the terminal.
- Configuring wired and wireless networks.
- Configuring satellite modems, routers, and other network devices within the satellite terminal.

Requirements:

- Higher technical education in software or a related field.
- Proficiency in C++, C#, Python.
- Familiarity with the Linux environment.
- Knowledge of network issues from a programming perspective.
- Knowledge of network device configuration (modems, routers (IP layer)).

Additional advantages:

- Knowledge of satellite modems.
- Knowledge of the topology of wireless telecommunication systems.
- Familiarity with the QT environment.

We offer:

- Work on innovative projects.
- Flexible working conditions.
- Benefit packages (medical care, sports, life insurance).
- A work culture based on collaboration and camaraderie.

If you do not possess all of the listed skills, nothing stands in the way of learning them. Therefore, we encourage you to send us your resume.
